- [Question 4](#)
- [Question 5](#)

For this assignment i decided to try the carbon design principles by IBM

[2x Grid – Carbon Design System](#)

[Text input – Carbon Design System](#)

Note:

1. None of the code is copied from the library provided by IBM. only the UI design and colors are referred from the design website.
2. For the questions q1, q3, and q4 which use mysql DB, I have created my own user itlaba with password passwd@123 and the application was working fine. I have changed the user and password to root and empty string for you to test it easily. (the reason why I created a new user is because i am not using LAMP stack but I have previously downloaded all the required softwares in LAMP stack in my system.)

Question 1

Question 2

N Sri Meher Chaitanya Varma

Love to work on DevOps, Cloud Computing & Services and Web Technologies

Objective

This layout objective is to show how to create a beautiful layout.
I have decided to use flexbox which is one of the best methods to create a layout with wide support in almost all devices. we can check the device compatibility from this website caniuse.com

Personal Information

This template is pretty basic with side bar at left and we have images displayed right side.

Family Information

Click on the links in the left side to go to different pages.
The basic content will be in the center.

The same works for company representatives and faculty too.

Question 4

Everything is the same as the q1 but I changed the session variables to cookies. If the user does not remember me, the cookies only last for a single session.
